NEW ROW OVER TAPE SWOPPING

SOFTWARE companies fear a new tape swap scheme will encourage more copying and — if it grows — hit the sale of new tapes.

It was set up by Les Martin who, until two months ago, worked for the controversial Buy 'n Try shop.

Mr Martin, 48, has started Computerhouse, trading name of Courtland Computer Services, which now has 600 members at £12.95 a year.

Members' used software is listed in a sheet and other members can either offer to exchange with tapes of similar value or buy at 80 per cent of the original price.

Mr Martin stressed that Computerhouse made no money from this and acted purely as a clearing house, checking that tapes were genuine and as new, complete with inlay cards, and passing on members' money.

But Richard Turner, managing director of Artic Computing, said: "I wish him the best of luck. I hope they run out of money in a few seconds."

And Dave Lawson, partner in Imagine Software, said the scale of copying was so large that Mr Martin's scheme would have an insignificant effect.

How does Computerhouse make a profit?

Mr Martin explained that his company would take a percen-

tage of the prices of used computers and other equipment offered to members and on sales of new software, which would sell at usual retail prices.

Within three months he planned to set up his own software company, called Fantasia.

He said that his advertisement had been misleading and was being changed. It had given

the impression that Computerhouse itself was prepared to buy secondhand software.

Mr Martin said: "It does not say what we are doing. It seems a bit under-hand. It does sound as if people could send in software and we will buy it."

He had also changed the

Use your vote for cheaper micros!

VOTE Peter Dick for cut-price computers, removal of the 70mph speed limit — and cheap cat food for pensioners' pets.

Mr Dick, a 36-year-old freelance programmer, has paid the £150 deposit to stand for his own BASIC party in Hammersmith, west London.

Nerve centre of his campaign is a victorian semi in the Goldhawk Road which he shares with his 27-year-old wife Jane.

Although the idea sounds eccentric, Mr Dick insists he has a serious message.

Making computers VAT-free would get more people using them and bring more work for the industry.

He said: "I'm trying to emphasise that one of the most important things for the country is the microcomputer — it's the

equivalent of the Industrial Revolution.

"Your readers have discovered that computers are the future. They will change our lives to the same degree as the internal combustion engine.

"Margaret Thatcher is allowing money for one computer per school — it needs one per person. What I want the government to do is to reclassify what they regard as a toy to an educational aid so there is no VAT.

"After all, computers are increasing the mental power of the nation in the same way that machines increased muscle power.

"I'm not trying for power and I'm not necessarily likely to win this seat. As far as I'm

A NEW SERIES FOR FIRST TIME USERS

"Learning to Use" is a new series of books which introduces newcomers to the most widely used micros in the marketplace.

The books assume absolutely no knowledge about computers and the reader is shown even the most fundamental operations such as "switching on" and "loading a program". The books lead the reader through simple programming and then on to graphics, with several programs which show how to achieve pictures and even animation!

The user-friendly approach is consistent throughout the text - not only are program listings clearly shown, but in many cases, a photograph is included to show what the program looks like when actually loaded and run!

All books in the series are £5.95 (incl. postage).

terms of membership. Now members did not have to buy from the list to take part. At the same time he had increased the annual subscription from £9.95 to £12.95.

He blamed the mistake in part on his anxiety to keep his scheme under wraps in case someone else tried to set up something similar.

He said: "I didn't want to give the scheme away. We need our members and we were trying to be discreet before the software companies started to scream, although I can't imagine why they should. We won't be that big. There are a million micro users out there and we only want 2,000.

"Exchanges are going on all the time. People do exchange among themselves.

"They will still buy the original stuff and that's what I want to do — sell new software."

Could his members copy tapes and then exchange the originals? Mr Martin said: "I suppose they could, but we would not entertain copies. We will only handle original tapes with the original inserts."

Mr Martin said the idea came to him while he spent two months working for Buy 'n Try, run by Bill Cannings. He had joined, after taking three night school courses in computing, expecting to be dealing with business accounting systems.

The boss of one software company said his staff had checked Mr Martin's company and found it was operating from the same address as one of Mr Cannings' firms. He suspected this was to enable Buy 'n Try to get more tapes.

Mr Martin denied this emphatically, saying that the registered office was his accountants' with operating addresses in Walthamstow and Ilford. He believed his firm had been confused with another with similar initials which was run by Mr Cannings.

He said: "There's absolutely no connection. I'm flattered that someone thinks there is — Bill Cannings' business is much bigger than mine."

Mr Martin said he had taken out a second mortgage and got

help from his bank to start Courtland Computer Services and that his co-director, Raymond Parr, owned the other 33 per cent.

Artic's Richard Turner said: "I suppose it could encourage copying. People do swop tapes — but you don't do it through a third party. He's going to have to have an enormous mailing list to affect the market."

And Mr Lawson said: "I don't believe there's so much swopping as much as copying. It seems to us that at least two-thirds of tapes are copies, and it could be as high as three-quarters. Who needs to swop when you can copy?"

"As far as we can see everyone copies across the board and across the professions. We have heard of a police officer, a dentist and a solicitor doing it. It's a crime condoned by society."

He knew of clubs where members spent the whole evening copying each others' tapes.

• • • Tapes for a myriad micros

Pasesoft would hate any micro owner to feel left out of the software scene. Its latest batch of software releases consists of four tapes for the BBC B, one for the Lynx, one for the Dragon, two for the TI-99/4A (with two and three games on one tape), one for the 16K Spectrum, five for the VIC-20, one for the 16K and even one for the 1K ZX81.

The company already has five Oric programs on the market — and will be releasing more Oric software in a couple of weeks.

Most of the current batch of 16 are action games, though the Lynx tape is a disassembler. Apart from the two ZX81 programs, priced at £3.95, they all cost £4.99 from Pase and other retail outlets.

Pase only branched out into the software business two months ago — before that it was a computer hardware shop.

Continued from front page

concerned that's not the target."

And the other two planks in his election platform?

He said: "You've got to have more than one policy. And one of the things that annoys me is that the 70mph speed limit was brought in as a temporary restriction — like income tax — yet car safety has got better. This is a restriction on technology and it's bloody silly."

And he has an imaginative reason for giving pensioners passes, like Railcards, for cheap cat food.

A survey had shown people with pets were more content and less likely to suffer from illness, including arthritis. And arthritis sufferers find it difficult to use computer keyboards.

He said the BASIC party — unlike most political parties, it has not members — had "just evolved."

He explained: "It really did seem silly that all those political parties were rabbiting on about things which were really rather trivial. We thought why not go on about trivial things in a humorous manner?"

Mr Dick has ruled out campaigning among the voters. He said: "I can't see myself standing outside Safeways for the next few days. That's not the way to solve the world's problems."

"I went out yesterday to the local shops — I thought I'd start near home — and I had no idea there was so much apathy. I asked one woman: 'Hello, do you live around here?' And she said: 'What's it got to do with you?'"

He has, however, been distributing a leaflet which shows him wearing a rosette in the BASIC party colours — yellow, dark maroon and mauve.

The leaflet points out: "He is the proud owner of a 911 Porsche and breeds Colour Point Persians — neither of which has had undue influence on the policies of the BASIC party."

Mr Dick programs in BASIC on minicomputers, mainly for financial data processing, and uses a VIC-20 for fun.

He has seven opponents in Hammersmith: Tory, Labour, SDP/Liberal Alliance, Independent Liberal, Workers Revolutionary Party, National Front and Ecology Party.

But what does his wife think about his standing for election?

Jane Dick, a press officer, said: "I was jolly delighted. I think it's great, but not for the reasons you might think."

"I objected when a politician said on television that nuts — and he meant people like Peter — should not stand for Parlia-

Candidate Peter Dick with computer and Persian

ment and that the deposit should be raised.

"Why shouldn't people like that road safety candidate and all the other splendid people be allowed to stand? I was all for standing myself."

"Let the eccentrics of the world unite. There's not enough of them."

"Is Peter a nutter? That's a bit unfair. He believes in enjoying life. There's more to life than working nine to five, five days a

week and pottering in the garden at weekends."

And does she support all of Mr Dick's policies?

She said: "I suppose I'd better say yes. But I don't know that I go along with lifting the limit."

Micro firms slammed by ASA

More computer companies have been caught out by the Advertising Standards Authority after complaints from the public about misleading ads.

Sinclair has come in for a lot of flak over the screen pictures used in its early Spectrum ads. The pictures suggested the Spectrum was capable of more sophisticated graphics than it can, in fact, produce, by failing to show the pixel structure of screen images and implying that images could be made to fill the entire screen.

And in stating that the Spectrum could be used with "virtually any TV", Sinclair omitted to mention that there had been incompatibility problems with several TV makes.

But the company has now promised to mend its ways after having its knuckles rapped by the ASA.

Delivery dates were a sore point for members of the public who complained about Fuller Micro Systems, of Liverpool. Fuller claimed it could deliver the goods within 14 days — but customers found they had to wait a lot longer, and the ASA agreed.

A hardware company, Newbury Data Recording, was slammed for advertising high-speed printers. When customers tried to order the printers, they found they were not yet available.

And an ad by Scotcade for the NewBrain, saying it had "screen editing, maths, BASIC and graphics — usually considered optional extras" and that "its graphic and video capabilities are second to none" was withdrawn after ASA action.

A member of the public pointed out that all the so-called "extra" features were now standard for home micros, and that the NewBrain's graphics were indeed out of the ordinary — because they were only in black and white.

Epson, however, came out with its head held high after a complaint about an ad for its HX-20 computer showing a man using the micro in the bath.

The complaint felt that, though the HX-20 works on batteries, it had a rechargeable power supply that should not be used near water.

After consultations with the Royal Society for the Prevention

of Accidents, it was decided that users were unlikely to recharge the HX-20 while taking a bath even if they wanted to — because of the lack of power points in bathrooms.

Advertising Standards Authority, Brook House, 2-16 Torrington Place, London WC1 7HN

It's a case for the Spectrum

On sale now are dk'tronics' new replacement keyboards for the ZX81 and Spectrum.

As well as the usual keys, they include an extra numeric keypad for time when you want to enter a lot of numeric data.

To fit the keyboard you remove the computer from its original case and screw it into the new one. The ZX81 version includes a motherboard which allows extra memory to be fitted inside the case.

And there's room inside for other add-ons, like the power supply.

Price: £45 inclusive.
dk'tronics, Unit 2, Shire Hill Industrial Estate, Saffron Walden, Essex CB11 3AX

The June Top Ten in Spectrum software at W.H.Smith.

The range of software available for the Sinclair Spectrum is to say the least, extensive.

So every month at W. H. Smith, we review the range with particular reference to presentation, challenge, excitement and value for money. And because we're quite severe it's a difficult job finally to arrive at a Top Ten. But as you can see, not impossible.

You don't have to take our word for it.

At W. H. Smith we stock the widest selection of Spectrum Software, so you can judge for yourself.

NO MORE LUCKY DIP!

Have you ever eagerly loaded a new program only to discover that you've wasted your hard earned cash? We know how you feel - we've suffered too.

Our company, Mr. Micro Ltd, has grown out of a passion for home computing, an obsession that went far beyond a hobby.

We are determined to ensure that all programs and accessories which bear the Mr. Micro name are proven, tried, tested and debugged and represent excellent value for money. After all we were in from the beginning and we have built ourselves a hard earned reputation in the world of home computing.

Our packaging has undergone a complete re-design so that before you buy anything you know exactly what the package contains, how it works and what the screen display will look like.

No lucky dip - we've got nothing to hide. All our programs are well written, exciting and exhilarating, designed to stretch your capabilities to the full and extract every ounce of performance from your micro.

Mr. MICRO

69 Partington Lane, Swinton, Manchester M27 3AL, England. Telephone: 061-728 2282

STRETCH YOUR MIND & MICRO WITH MR. MICRO GAMES & ACCESSORIES

Mysterious Island Vic 20 16 K £9.90

Your graphic adventure begins after escaping from prison in a hot air balloon - try to land it on Mysterious Island, then the fun really begins. • Booby Trapped Fields • Killer Bees • Hostile Natives • Hidden Clues • Force Fields • Capture the Nautilus • Full Graphic Display • Several Games lead to Exciting Climax • Separate Practice Program • Includes Blank Data Tape to store the game to play later.

This game requires a high level of skill and lightning reflexes. All successful adventures can claim a unique personalised award by sending Mr. Micro their final position at the end of the game - (For use with Commodore Vic 20, 16k expansion, by joystick or keyboard).

Ramdam Vic 20 £13.90

This accessory enables programs which would normally only work with 3k expansion to work with 8k or 16k expansion. RAMDAM saves having to buy a 3k pack if you already own an 8k or 16k. With RAMDAM and a Commodore 16k expansion all known tape games will run on your Vic 20. • Includes Memory Test Program • Free 6.5k game - MICROVADERS for use with Joysticks.

Hunchy Spectrum 48k £6.90

Guide Quasimodo over the ramparts to rescue Esmeralda. Leap flames, dodge arrows and ring the bells. • Amazingly good graphics • Fast Arcade Action • You'll be surprised at what your micro is capable of • Very demanding.

Dragon Tamer Dragon 32 £9.90

Allows Atari type and other digital joysticks to be used with the Dragon - giving better response and more control. For the first time your Dragon will be able to reflect your true skills. • Achieve higher games scores • Less Frustration.

Plus To ensure maximum value, Dragon Tamer includes two original games for use with digital joysticks:

Goldrush Vic 20 3.5k £6.90

This graphic adventure program was the first in the world to offer real gold for the successful adventurer. An idea which has been much copied but never equalled. • Fun • Educational • Challenging • Clues • Puzzles • Searches • Fast Reaction Game.

Should you experience any difficulty in obtaining Mr. Micro products from your local dealer, they are available post free direct from Mr. Micro.

Send your remittance to: Mr. Micro Ltd, 69 Partington Lane, Swinton, Manchester M27 3AL.

Cheques should be made payable to Mr. Micro Ltd. Please allow 28 days for delivery.

Note to dealers

You should benefit greatly by stocking the Mr. Micro range of software and accessories. For further details telephone Jim Gregory at Mr. Micro without delay.

Brian Candler and Clive Wright — taking on a giant

Commodore's rivals, aged 15

Two fifth formers are taking on the might of Commodore with their extended BASIC for the Commodore 64.

It costs £19.95 on tape, undercutting Commodore's long-awaited Simons BASIC cartridge by £30.

However, the company's technical services manager, Rod Wellburn, pointed out that its version had a big design team behind it as well as offering more new commands.

Clive Wright and Brian Candler, both 15, met at school and the idea for BC BASIC came after Clive said to his friend: "I wish I had IF... THEN... ELSE on my Commodore 64."

Then Brian tackled REPEAT...UNTIL successfully. Clive wrote out a list of 300 commands and, he said, Brian managed 90 of them, all in machine code and using just 6K of RAM.

They have formed BC Computers with £110 — £30 savings from Brian and Clive and £50 from Brian's mother, Mrs Mary Candler who is also dealing with their post.

They have spend £60 on an advertisement and another £11.17 is buying 25 blank cassettes to fulfill early orders until they know if the demand will make it worthwhile to go to a commercial duplicating company.

Meanwhile, both are in the middle of sitting exams for 10 O-levels.

Already they are planning more software products. BC BASIC is due on sale in about a week and at the same time there will be two versions of a familiar-

sounding game called Pakman, one in 64 BASIC and the other making use of BC BASIC.

Then there will be FIG-FORTH for the 64, more games and a graphics aid.

Clive said: "My dad's taking it all with a bit of suspicion at the moment. He's waiting until the money comes in until he says 'yippee'. He's quite amazed at what we've done so far.

"He thought it was another of my ideas which would come crashing to the floor. My mother is less cautious — but she'll only believe it when it happens."

Among the commands offered by BC BASIC, said Clive, are PLOT and DRAW, PAPER and INK, HIMEM, sound instructions, AT and BORDER. It also has the ability to switch two high-resolution screens.

Commodore's Simons BASIC, named after the originator David Simons, adds 114 instructions and will be launched at the 4th International Commodore Computer Show, at the Cunard Hotel, Hammersmith, on June 9-11.

Mr Wellburn said: "Good luck to them. You can't blame them for trying. I never knock the opposition."

Without seeing BC BASIC, he said he could not judge it. But he did says that tape had disadvantages which Commodore had overcome by putting Simons BASIC in a cartridge.

Sniper – for the Dragon 32

Are you fast? ... are you good? ... can you shoot straight? ... Here's your chance to prove it. Not just another shoot 'em up game, but the ultimate in hit 'em fast, and hit 'em hard games – but this is no game ... your life is at stake!

Fast action machine code game, which calls for a steady trigger, and nerves of steel. 10 levels of difficulty, joystick controlled gunsight, high res graphics and sound. "Smart" targets!!

Game design and dragonware: R. Lowry

Cosmic Defender – for the BBC model B

"I thought I could do it ... now I'm not so sure, 'Hang on to 'em at all costs' were the orders from star command, it could cost me more than I bargained for! Even with the best star fighter in the galaxy!! I've got to hang on ... keep going ... must fight ... but for how long?..."

Defend the federation Plasmaton fuel dumps from the mindless suicide pilots of the alien battlefleet. Use your cosmic starfighters weaponry and hyperspace to destroy the evil enemy ... but watch your fuel, bonus points and fuel cost blood!!! How long can YOU hold out in this fast action game by Anthony Rafferty.

THE MISSING LINK

Acnean Mutoids – for the BBC model B

"Where am I"?.. A reasonable question, but the shock answer is only the first in a series of catastrophes that might lie ahead ... A bolt of lightning stabs your eyes as the monitor awakes you from stasi-sleep, only to tell you the worst!

Your interstellar cruiser has been invaded by the evil race known as the acneans – even worse, you are alone!!

In a micro-instant you realise the task that faces you is one of spine-tingling terror – you must risk all to save earth from a horrific destiny. Can you avoid the blood dripping, plasma curdling mutoids and activate the ship's self destruct computer – do you have the courage? Can you save mother earth??, can you save yourself??? the answer is surely ... how??? Superlative graphics and sound make this game by Phil Woodrow, the ultimate challenge!

All of these superb games £6.50 each, inc first class post, packing and VAT.

All orders despatched within 24 hrs of receipt.

Available from all good software outlets or direct from Soft Joe's.

Dealership enquiries to:
Soft Joe's Software, Business Centre, Claughton Road, Birkenhead, Merseyside.

Coming soon – games for VIC 20, Commodore 64, ORIC, Spectrum and Atari. (Ref HCW)

Bandit – for the Dragon 32

Ruthless ... that's the only way to describe it, try your luck against the meanest fruit machine in the universe. 1,000 credits and you break the bank. It's not easy, but then, you wouldn't expect it to be would you???

You can almost feel your pocket getting lighter in this full feature fruit machine game. Based on a real 20 symbol per reel machine, this superb simulation displays excellent high res colour graphics and realistic sound: random hold and nudge facilities, with the meanest, most vicious gamble feature in the west! without doubt, the most compulsive addictive fruit machine on the market. Specifically for people with deep pockets and money to burn.

Game design and dragonware: R. Lowry

Why computer games aren't up to scratch

The Sigma Society has campaigned since 1975 to promote games playing and to improve the rewards and recognition given to the board games inventor. For example, we have tried to persuade manufacturers to publish and promote the inventor's name, with varying degrees of success. And we have tried to increase the appallingly low royalties — five per cent of the wholesale price, on average — paid to inventors, without any success at all.

So I'm not sure whether to cheer or cry when I read in Home Computing Weekly, that computer games inventors have their names associated with their programs and receive royalties of 15-33 per cent.

My ambivalence arises from the type of computer game so far available. There seem to be three categories: the cosmic-astro-invaders-frogger type; adventure games; and micro versions of existing board games.

The first category is, frankly, uniformly boring. It is purely movement/co-ordination oriented, and makes no intellectual demands. Adventure games can be more taxing, but graphics are usually rudimentary or non-existent. And I can't, for the life of me, see the point in playing a version of Monopoly — which is 50 years old anyway — on a television screen.

These aren't just my opinions. When I acted as a consultant to a well-known video games company, their research confirmed that customers quickly get bored with action games.

What I hope will happen as the industry matures is that professional games inventors, such as we have at Sigma, will co-operate with programmers or, better still, learn to program themselves. That way, the expertise of games invention could be combined with the skills of the programmer. Sadly, however, those of our members currently struggling to understand programming are agreed that most manuals are turgid, badly written, and a long way from being user-friendly.

As a professional games inventor, the parallels between writing games rules and writing an instruction primer are obvious. In both cases there are two universal rules. One, start from scratch and assume complete ignorance of the subject by the reader. Two, try to envisage every major eventuality and explain concisely but clearly what to do in every case. I would personally add that, three, you should lighten the subject with a little humour — but try to find that in a user's manual!

Eventually, I hope to see a marriage between games inventors and software producers, with those who enjoy playing games as the ultimate beneficiaries. But we will only extend the numbers and involvement of "gamers" when we start to satisfy their intellectual desires — outwitting human opponents will always be more satisfying then outshooting a program.

Jack J Jaffe
 Founder, Sigma

• What makes you pleased or annoyed about the micro scene, hardware or software? We welcome contributions for this column. Send them to: Paul Liptrot, Opinion, Home Computing Weekly, 145 Charing Cross Road, London WC2H 0EE. Please include your occupation and your interest in computing.

Draw it again, Aaron

If you're in London this month or next, drop into the Tate Gallery and see a computer artist at work.

Aaron, a program written by British artist Harold Cohen, will be churning out drawings at the rate of about 12 per hour, with the aid of four specially-built drawing machines.

But don't expect to be able to run Aaron on your home micro. According to Cohen the program is "about as long as a short novel", and uses a powerful VAX-750 minicomputer.

It is designed to imitate the way in which works of art are created by human beings, by following a series of artistic strategies like drawing a line around something or emphasising an existing edge.

Confused? You're not alone. Cohen said: "Over and over again I've had to explain to people that no, there is **not** a different program for each drawing, and no, I did **not** do the drawings in advance and in fact have never seen them before, and no, the

program is **not** drawing randomly — though that's perfectly clear just by watching Aaron draw."

Aaron has been on show before in Amsterdam and San Francisco, and used to use a small mechanical "turtle" to do its drawings. But Cohen found that "the turtle was so engaging that people tended to look at it rather than the drawings, so I had to retire it."

The exhibition is on until July 24, and admission is free.
 Tate Gallery, Millbank, London

Are micro camps really best for kids?

Last year's novelty becomes this year's problem. Case in point: computer camps.

Last summer we noted with some amusement that Mom and Dad could now get rid of Junior and little Sally for a few weeks by sending them off to summer camps (mostly in California, where else?) which featured computer literacy as their drawing card instead of the more traditional offerings such as sailing, horseback riding, baseball, and swimming.

So what is wrong with this, you say? Plenty, I think. If you go to any arcade in nearly every large shopping mall in California (and probably everywhere else over here) you will see crowds of kids playing their favorite video games. The games make so much money and are so popular that you now see them in more non-"traditional" locations such as hamburger stands and gas stations (petrol stations to you).

The computer versions of these arcade games are generally offered to kids attending the camps, along with (we hope) tutorials on programming and more worthy pursuits re computers. And I suppose that that is all right, providing little Johnny and Suzy are able to play outside once in a while.

What worries me, though, is that Mom and Dad, having read so much about the importance of being computer literate, and about how everyone who is intending to be anyone must acquire computing skills, will send their kids off to become the programmers of the future in just a couple of weeks.

If Mom and Dad would just be satisfied with having their kids come back home more competent than when they left, that would be OK. However, what may be more typical is that they will expect, or even demand, that their kids become able to be the top people in the field because of this experience.

Perhaps we should turn to the world of sports for a parallel situation. For example, how many children turn out to be miserable and emotionally scarred by pushy parents who tried to turn little Emily or Joey into Chris Evert Lloyd or Jimmy Connors but pushed them too hard when they had too little talent? Too many I fear.

What this computer summer camp business may initially turn out to be is a race to "keep up with the Joneses." This is unfortunately all too common here. This would be bad enough without the thought that the price of keeping up is the emotional well-being of the kids.

I feel I am a competent programmer and as computer literate as the next person. However, I sure am glad Mom and Dad decided I should learn how to sail, ride a horse, and learn some social skills when I was 14 and they sent me to summer camp.

I wonder how many teenagers will come back from camp this year well on the way to becoming complete nerds, capable of socializing with no-one and relating to nothing but a terminal, and excellent at only one physical skill — typing. We'll see what happens.

If you own a TI-99/4a, you will be interested in this. A firm called Elek-Trek Inc, is offering excellent prices on hardware and software for your machine.

It has recently placed full-page ads having very small print to allow space for all the items they carry — in several electronics magazines. As an example of their discount price on hardware, a PHP 1200 expansion box which lists for about \$250 is being offered for \$180. They also offer software with a discount of at least 10 per cent on average. You can contact them for a catalog. Elek-Trek Inc, 6557 N. Lincoln Avenue, Chicago, Illinois 60645 (312) 677-7660.

Do you own a VIC-20? Are you interested in the FORTH language? If so, this will be of interest to you. Human Engineering Software, of 71 Park Lane, Brisbane CA 94005, (415) 468-4110, has just brought out a cartridge for the VIC-20 that contains a version of the FORTH language supporting all standard FIG—FORTH (FIG is the FORTH Interest Group) commands except the disc commands and a few higher-level words.

Briefly, FORTH is a very powerful and relatively easy language to learn. It takes up very little room in memory, which makes it ideal for machines like the VIC. The language has been slow to catch on in the micro world, although there are some excellent commercial applications written in FORTH. It is also a very fast language, usually on the order of 10 times quicker than an interpreted BASIC for the same machine.

Used in conjunction with a basic FORTH text, this system, available for only £59.95 plus shipping, is a real bargain if you feel limited by BASIC. This system will work in the basic VIC memory configuration and will handle memory expansion to 29K, but cannot use the 3K expansion cartridge.

If you own any of the following computers, Atari, Commodore, Sinclair/Timex, Ohio Scientific or Apple, I recommend you should send for a catalogue from Hofacker.

This firm produces an excellent product offering including books, software, hardware, and peripherals. All items are moderately priced, and described in one of the best catalogues I have seen associated with this industry. Descriptions of each book list a summary and its table of contents, and book review reprinted from a magazine if one has been done.

Descriptions of programs are complete and are often accompanied by a sample printout and/or programming examples of its use. Among other things, they offer: several books on Atari programming, including FORTH for the Atari; a word processing program for the Atari; a powerful assembler for the VIC-20; a word processing program for the Atari; a powerful assembler for the VIC-20; an expansion experimenter breadboard for the VIC-20 that plugs directly into the expansion slot; a machine language monitor for the ZX-81; a prototyping board for the ZX-81; a machine language monitor for the ZX-81.

Most of the items in the catalogue sell for well under \$30. Ask for the Hofacker catalog when you write to Elcomp Publishing Inc, 53 Redrock Lane, Pomona CA 91766, (714) 623-8314. They accept Access and Eurocheck too, by the way. Anticipate about a 15 per cent charge for shipping.

That's all for this week.

Bud Izen

Fairfield, California

If you want to learn more about microcomputers but are not technically inclined, there is a new magazine out that you might be interested in. It is called Micro Discovery. Its emphasis is on the human factor in computer. In other words, how microcomputing is affecting our lives. New products are covered, but the information is presented from the user's viewpoint, not the hardware engineer's. It looks very good to me. If you want to learn more, contact Micro Discovery, P.O. Box 7500, 80 New Bridge Road, Bergenfield, New Jersey 07621

Professional Software for ZX81 and Spectrum

SPECTRUM 48K

■ **Payroll:** Weekly, monthly, hourly. All tax codes, and pay levels. Guaranteed correct. £25.00 ■ **Statutory Sick Pay:** Better than programs costing 10 times as much on other machines. £40.25 ■ **Stock Control:** Over 1500 lines. Find, add, delete, in 2 seconds! Sinclair or full-width plain paper printer (with interface) supported. £25.00 ■ **Spectrum Demo Tape:** Demonstration versions of payroll, stock control, SSP. On one tape. £3.95 ■ **Critical Path Analysis:** Enter network of over 500 activities. Program finds critical path. Durations and costs can be modified, and the calculation repeated. Full-width printer supported. £15.00

SPECTRUM 16K (usable on 48K)

■ **Mortgage:** See how repayment amount affects duration and total amount paid. While paying: see how much interest and how much capital you are paying. Month-by-month table printed. On the same tape - ■ **Loan:** Calculates true interest when paying instalments etc. £8.00 (both programs together)

Parallel Printer Interface:

Allows you to use a full-width plain paper printer with your 16K or 48K Spectrum! Has too many features to list here! COMPLETE with cable, connectors, and supporting software - nothing else to buy! £45.00. A runaway best-seller - so please contact us about delivery. ■ **Printers:** We can help you to choose the best printer for YOU and get it to you fast at a sensible price. FREE on request with orders for printer or interface: simple word processing program for Spectrum!

Tape Loading Problems With Your Computer?

■ **The Microcomputer User's Book of Tape Recording:** Is a practical guide to help you get programs in and out of your computer. Written for the computer user - but several audio and computer professionals have found it useful! ISBN 0 946476 00 4. ONLY £3.15 incl. postage (£2.90 in shops) ■ **Test and Alignment Cassette:** Tape loading problems are often due to a mis-aligned tape head. Align your tape head by ear with our tape - no instruments required! £4.90 ■ **Loading Aid:** Allows you to get tape playback level right first-time. Helps with dropouts and to ease tape quality too! Standard model £5.95. De luxe model £7.95

ZX81 16K

■ **Beamscan:** Computers bending moment and shear force diagrams for a simply supported beam with 1-99 point, uniform and uniformly tapered loads. £25.00 ■ **Time Ledger:** For up to 17 employees, 200 clients. £15.00 ■ **Optimax:** A powerful linear optimisation program up to 75 variables <,=>, constraints. £40.00 ■ **Payroll:** As above but only up to 30 employees. £25.00 ■ **Stock Control:** As above but 400 stock lines in 16K or 2000 lines in 64K. £25.00 ■ **Critical Path Analysis:** Up to 500 activities in 16K. Over 500 activities in 48K. £15.00 ■ **Budget:** Keeps track of expenses and compares with budget. 50 headings plus 12 months or 12 categories. £15.00 ■ **Financial Pack:** Contains three programs: Mortgage, Loan and VAT £8.00
All items are post free and include VAT. Programs are supplied with comprehensive manuals.

Remember - We at Hilderbay pride ourselves in the development of high quality professional software that is fully functional and with full support. Not fancy packaging, fancy prices or fancy names.

COMING SOON

■ **Word Processing Package** will allow the use of a daisywheel typewriter, linked to Spectrum, as keyboard and printer.

AMSOFT

OPERATING AND CONTROL SYSTEMS FOR DISCERNING ZX81 AND SPECTRUM USERS

All AMSOFT products are designed to help users get the most out of their machines. No additional hardware is needed to run them, but they can support other devices if needed.

AM-ZXFILE allows you to use large cassette data files in BASIC programs, with no limit on file size, and input/output in the same program, like a big machine. For ZX81 at £4.00, and Spectrum at £5.00.

AM-ZXMON is the operating system which allows you to develop, edit, run, and checkpoint machine code programs, and to create and use libraries of machine code routines on tape, saving hours of work.

ZX81 version £6.00, and Spectrum version £7.00.

Under the control of **AM-ZXMON** you can run **AM-ZXEDIT** and **amagon** combined pack for ZX81 £10. For Spectrum **AM-EDIZON** combined editor and assembler £10.

editing assembly language source code, for input to **AMAZON**, a full assembler which creates machine code tape files. User symbols, hex., decimal, and string constants, and saving/re-use of symbol tables are among the features.

NEW! AM-ZXSP takes a saved ZX81 program tape and loads it into a SPECTRUM leaving it ready to run, edit or save. No more retyping of programs when you change machines.
Available now at £6.50.

All our prices include VAT.

It's a tape — and a magazine

Sitting on a floral sofa in a 200-year old Cotswolds farmhouse, Iolo Davidson created a computer magazine with a difference — it's all on a cassette tape.

It took two months to put together, working into the small hours with just two of his dogs for company.

The result is Spectrum Computing, now on sale at £2.99.

And, despite his dislike of cities, Mr Davidson, 37, made the journey from his 18-acre farm to London to see his magazine launched by ex Tomorrow's World presenter William Woollard.

The venue, chosen by the publishers to contrast with the product, was one of Fleet Street's oldest pubs.

Mr Davidson's magazine, which works on both Spectrum models, includes software reviews — readers can see and hear samples of commercial programs — a Morse code trainer, chess graphics, a routine for turning sideways and upside down, plus two arcade games.

Altogether there is 80K of code which readers load following on-screen prompts. Any part of the magazine can also be loaded by using its file name.

Mr Davidson said: "You get a lot of code for your money and you don't have to type all the stuff in. And if you buy some computer magazines you'll be lucky if you find two of three pages for the Spectrum."

"I've put in the sort of things that interest me. We don't want to go over the heads of some of the readers nor do we want to talk down to them."

"It's a difficult balance to strike and I hope I've achieved it."

"Anyone can use it easily and we invite people to use some of the routines in their own programs."

Mr Davidson has a Welsh mother — hence his first name — and an American father who met during the war. His father was a navigator on B17 bombers and his mother a nurse. They met after his father was released from a German PoW camp.

And, although he was born in Wales, Mr Davidson spent 16 years in America, returning 17 years ago.

He was given his first com-

puter, a £300 Triton with 2K of RAM, at Christmas 1979 and taught himself programming from magazines and books. He was a regular contributor of programs and articles to magazines.

Before then his jobs has included silversmith, petrol pump attendant and — in San Francisco — a rag-picker's apprentice.

Now he shares a farm near Cheltenham with a writer, Janet Sloss. They have about 60 sheep, three calves and a cow called Daisy, geese, cats and a ferret. Their dogs are Tick ("because it's watchdog") and his two companions when he is programming, a labrador-type mongrel called Legs and a pedigree Saluki named Zabna.

When he was invited to edit Spectrum Computing, Mr Davidson said his reaction was: "I thought I'd made it."

"It was important to me that I would not have to come into the office every day."

"I wouldn't like to work in London. There's too many people."

Mr Davidson, who said Spectrum Computing was the first commercial magazine coming out in this form. But there is a problem with some computers because they keep bringing out revised models.

"You could have had the idea two of three years ago but it would not have worked then. You need a popular computer and one with a reliable cassette interface."

And he revealed some of the contents of the next bi-monthly issue: a fruit machine game written by a 13-year-old, a Frogger-type game, a dice-logic game and a sound customiser plus more reviews. And he is adding a siren sound to remind readers when to stop the tape recorder.

He said: "I've been coming up with more tricks for future issues."

"it is ia proper magazine, not just a bunch of software linked together. But we can do a lot more than paper magazines."

"We want contributions from readers and there's going to be advertising too."

Mr Davidson edits his magazine in the living room of his farmhouse, built in 1750, in front a big stone fireplace with a Spectrum perched on a footstool with tapes and papers spread around. Often he is coding until three in the morning.

As well as two Spectrums —

Iolo Davidson and his magazine on tape

16K and 48K to ensure the magazine works on both — the household is also equipped with a 64K Superbrain plus two floppy disc drives and a Praxis typewriter as a printer.

Janet Sloss is using it to write her books.

Spectrum Computing is

published by Argus Specialist Publications, owners of Home Computing Weekly.

Spectrum Computing, 145 Charing Cross Road, London WC2H 0EE. 01-437 1002. Distribution: 513 London Road, Thornton Heath, Surrey CR4 6AR

You could be on our pages

We welcome programs articles and tips from our readers.

PROGRAMS should, if possible, be computer printed to a width of 48 characters (use a new ribbon) and/or sent on cassette. Check carefully that they are bug-free. Include details of what your program does, how it works, variables you have used and hints on conversion.

ARTICLES on using home computers should be no longer than 2,000 words. Don't worry about your writing ability — just try to keep to the style in HCW. Articles most likely to be published will help our readers make better use of their micros by giving useful ideas, possibly with programming examples. We will convert any sketched illustrations into finished artwork.

TIPS are short articles, and brief programming routines which we can put together with others. Your hints can aid other computer users.

Competitive rates are paid.

Keep a copy of your submissions and include an SAE if you want them returned. Label everything clearly and give a daytime and home phone number if you can.

Paul Liptrot, Home Computing Weekly, 145 Charing Cross Road, London WC2H 0EE

A complete machine code monitor including mnemonic assembler/disassembler, block move and verify, trace and slow-motion run and full cassette handling, plus manual. £15.00 inc VAT and 90p postage and packing 16k or 48k

ORIC MUNCH

Our best arcade game yet. Can you fight off the ghosts, eat the power pills and catch the elusive fruit. An exciting game that will keep you amused for hours. £7.95 inc VAT and 40p postage and packing 48k

3D LINK 4

A set of new exciting and challenging games. Hangman, Moonlander, Substrike, Roadrace and 3D Noughts and Crosses. £6.90 inc VAT and 40p postage and packing 48k

HOUSE OF DEATH

If you were baffled by Zodiac you will be terrified by House of Death. Can you discover the secret of the haunted house and escape with your life? £9.99 inc VAT and 40p postage and packing 48k

ORIC BASE

This is a database system used for the maintenance of personal and small business information. It is supplied on cassette with a comprehensive manual. A sophisticated query language is used to manipulate data and allow reports to be printed, data to be sorted or moved about and running totals to be kept. A Macro command facility allows the creation of application specific command strings which can be used easily by non-technical personnel. Requires a 48k machine. Price: £14.50 including VAT and 90p postage and packing.

ZODIAC

A traditional adventure game in which the player has to find the 12 cunningly hidden signs of the Zodiac which lead him to greater treasures. The player manipulates objects through simple sentences which the program can understand and can ask for his score at any time. A save game feature is also included. Requires a 48k machine. Price: £9.99 included VAT and 40p postage and packing.

ORIC-CHESS

Using high resolution graphics to display the chess board this package will play a challenging game of chess with five levels of skill. The computer looks ahead for its own moves plus its opponent's. The skill level dictates how far the computer looks ahead although at the expense of more time. All chess rules including Castling and En Passant are obeyed. Requires a 48k machine. Price: £9.99 including VAT and 40p postage and packing.

ORIC FORTH

This is a cassette-based implementation of FIG-FORTH, the language distributed by the Forth Interest Group in the United States. It has been extended to utilise the graphics and sound capabilities of the Oric. It is supplied with an editor and a full Forth assembler. A 96-page manual is included in the package. A demonstration music program is also supplied. Requires a 48k machine. Price: £15.00 including VAT and 90p postage and packing.

ORIC OWNER MAGAZINE, £10

Why should you subscribe to *ORIC OWNER*? Your Oric 1 is one of the most powerful low-cost computers on the market today. *Oric Owner* is the only magazine totally dedicated to the Oric and its supporting hardware and software. From issue to issue *Oric Owner* is able to bring you in-depth information on the Oric, advance news on the latest add-ons, superb programs to try and 'behind the scenes' interviews with the engineers who designed it. If you wish to keep ahead of the latest developments and news on the Oric then *Oric Owner* is essential. At only £10 for a year's subscription of 6 issues (£15 for overseas readers) can you afford to be without *Oric Owner*? **SUBSCRIBE TODAY!**

Calling all Software Writers.

If you can write top quality games, business or utility software we want to hear from you. Haven't got an Oric? Convince us of your capability and we will supply one!

```

In Blockbuster you must move fast to catch the rapidly descending nasties. Individually they are no match for you but left unchecked they collect below you and eventually overwhelm your position.

The way to survive against this pulsating alien rain is catch them before they reach the ground. To do this you must use the left and right cursor controls to position your bat in their path.

The game makes full use of the Oric's excellent sound and colour facilities and you are left in no doubt when you have been beaten.

How it works

10-30 variable table
 50-90 new player's position
 120-130 player's movement
 140-205 alien's movement
 220-250 catch routine
 260-362 grande finale
 365-372 messages/rerun
 373-390 set screen colours
 400-530 redefine characters

Ten useful tips for your ZX81

There's no need to re-invent the wheel. Nick Godwin has been digging around in his ZX81 and has come up with these handy routines to make program writing easier

Tip 1

This routine demonstrates how PEEK 16442 can be used to operate SCROLL only when the bottom of the screen is reached.

AUTOMATIC SCROLL AT BOTTOM OF THE SCREEN

```
10 INPUT X
20 PRINT X
30 IF PEEK 16442<3 THEN SCROLL
40 GOTO 10
```

Tip 2

Clearing the screen following a SCROLL statement can be a painfully slow business, as demonstrated by the first listing. However, these modifications allow the screen to be cleared smoothly and quickly.

```
10 FOR J=0 TO 21
20 LET X$=""
30 FOR K=0 TO INT (RND*40)
40 LET X$=X$+"X"
50 NEXT K
60 IF LEN X$>32 THEN LET X$=X$
(TO 32)
70 SCROLL
80 PRINT X$
90 NEXT J
```

```

XXXXXXXXXXXXXXXXXXXXX
XXXXXXXXXXXXXXXXXXXXX
XXXXXXXXXXXX
XXXXXXXXXXXXXXXXXXXXX
XXXXXXXXXXXXXXXXXXXXX
XXXXXXXXXXXX
XXXXXXXXXXXXXXXXXXXXX
XXXXXXXXXXXXXXXXXXXXX
XXXXXXXXXXXX
```

MODIFICATIONS FOR SMOOTH CLS

```
70 SCROLL
80 PRINT X$;
85 IF PEEK 16441>1 THEN PRINT
TBE 317"
90 NEXT J
```

Tip 3

ZX81 users are advised to SAVE a program several times as a precaution against tape corruption. Avoid the tedium by using these routines which automatically SAVE the program a number of times in succession, but when LOADED the program will RUN automatically. The first routine works when RAMTOP is not reset; the second routine will work for any setting of RAMTOP.

AUTOMATIC MULTIPLE SAVE

```
9000 INPUT X$
9010 POKE 16388,3
9020 POKE 16388,PEEK 16388-1
9030 SAVE X$
9040 IF PEEK 16388 THEN GOTO 9020
9050 RUN
```

MODIFICATION IF RAMTOP HAS BEEN RE-SET

```
9000 INPUT X$
9005 LET X=PEEK 16388
9010 POKE 16388,3
9020 POKE 16388,PEEK 16388-1
9030 SAVE X$
9040 IF PEEK 16388 THEN GOTO 9020
9045 POKE 16388,X
9050 RUN
```

NOTE THAT LINE 9050 SHOULD BE CHANGED TO: 9050 GOTO N IF DATA IS TO BE PRESERVED

Tip 4

To avoid printing the cursor in program listings, LLIST a non-existent number before the first line number required in the listing.

```
LLIST 100
100 REM DUMMY LISTING.
110 REM
120 REM
130 REM
140 REM
150 REM
```

```
LLIST 99
100 REM DUMMY LISTING.
110 REM
120 REM
130 REM
140 REM
150 REM
```

ZX81 PROGRAMMING

Tip 5

According to the ZX81 manual, lines 22 and 23 of the screen display are reserved for commands, input data, reports and so on. This routine shows how these two lines can be accessed by the programmer. Note that it is very important to POKE 16418,2 immediately after the PRINT statement. Not also that number of string input will cause loss of these two lines, as demonstrated at line 30.

```

10 POKE 16418,0
11 PRINT AT 22,0;"LINE 22",,"L
INE 23"
12 POKE 16418,2
20 IF INKEY$="" THEN GOTO 20
30 INPUT X
    
```

FAST

```

10 POKE 16418,0
11 PRINT AT 22,0;"LINE 22",,"L
INE 23"
12 POKE 16418,2
20 PAUSE 4E4
21 POKE 16437,255
30 INPUT X
    
```

Tip 6

The ZX81 "naturally" prints columns of figures tabulated at the left. Human beings on the other hand, prefer numbers to be tabulated at the decimal point position. This routine and sample display shows a useful line for neat tabulation of numbers.

```

10 INPUT X
20 PRINT TAB 14-LEN STR$ INT A
BS X+(ABS X<.1)-(X<=0);X
30 GOTO 10
    
```

```

1234567
-1234567
 456
-987
 23
-23
 0.3
-4.987
 0.9
-0.9
 .08
-.0789
 .00876
 .0987
-.09876
    
```

Tip 7

It can be useful to display a limited number of decimal places. This routine, with sample displays, shows how the number X can be displayed to a pre-determined number of decimal places, rounding as necessary.

```

10 PRINT "HOW MANY DECIMAL PLA
CES?"
20 INPUT D
30 CLS
40 PRINT "X","TO ";D;" DEC. PL
ACES"
50 INPUT X
60 PRINT X,INT (X*10**D+.5)/(1
0**D)
70 GOTO 50
    
```

```

X          TO 2 DEC. PLACES
10         10
    
```

10.1	10.1
10.111	10.11
10.115	10.12
99.99	99.99
99.999	100
.084	.08
.085	.09
-10.111	-10.11
-10.115	-10.12
-99.994	-99.99
-99.999	-100
-.0745	-.07
-.0755	-.08
X	TO 3 DEC. PLACES
1.1234	1.123
1.1235	1.124
0.995	0.995
0.9954	0.995
0.9955	0.996
.0004	0
.0005	.001
-1.1234	-1.123
-1.1235	-1.124
-0.9954	-0.995
-0.9955	-0.996
-.0004	0
-.0005	-.001
9.9994	9.999
9.9995	10
-9.9994	-9.999
-9.9995	-10

Tip 8

The combined operation of displaying a number pre-set number of decimal places and tabulating it neatly on the screen can cause a lot of headaches. This listing overcomes the problem, with a somewhat convoluted but nevertheless essential line 60.

X	TO 2 DEC. PLACES
10	10
9	9
9.991	9.99
9.999	10
-10	-10
-9	-9
-9.991	-9.99
-9.999	-10
.0123	.01
-.0123	-.01
-.015	-.02
.015	.02
99.999	100
-99.999	-100
99.994	99.99
-99.994	-99.99

```

10 PRINT "HOW MANY DECIMAL PLA
CES?"
20 INPUT D
30 CLS
40 PRINT "X","TO ";D;" DEC. PL
ACES"
50 INPUT X
60 LET Y=VAL STR$ (INT (X*10**
D+.5)/(10**D))
70 PRINT X,TAB 22-LEN STR$ INT
ABS Y+(ABS Y<.1)-(Y<=0);Y
80 GOTO 50
    
```

Tip 9

The handy little routine starting at line 100 takes a copy of whatever is on the (fully expanded) screen into XS. To demonstrate, run the routine in fast mode, press newline when it stops and then, when it finally comes to rest, enter the command PRINT XS.

```

10 FOR J=1 TO 704
20 PRINT CHR$ INT (RND*63);
30 NEXT J
40 PAUSE 4E4
41 POKE 16437,255
100 LET X$=""
    
```

ZX81 PROGRAMMING

```

110 LET Q=PEEK 16396+256*PEEK 1
6397+1
120 FOR J=Q TO Q+724
130 IF PEEK J=118 THEN LET J=J+
1
140 LET X$=X$+CHR$ PEEK J
150 NEXT J
    
```

Tip 10

The first listing allows input of two numbers, X and Y, which are then plotted. By entering 99, the function is changed to unplot. For example, run and enter 10,10,99,10,10. This routine works by POKEing address 16527 with the code for PLOT or UNPLOT as required.

The question is: How did I know which address to POKE? The problem is solved by the routine starting at line 9000, which can be tagged onto the end of any BASIC program and gives a display in three columns: 1 the address, 2 the value at the that address and 3 the character represented by that value.

```

1 GOTO 10
2 PLOT X,Y
3 RETURN
10 REM DEMONSTRATION PROGRAM
20 INPUT X
30 IF X=99 THEN GOTO 100
40 INPUT Y
50 GOSUB 2
60 GOTO 20
100 POKE 16527,246+(PEEK 16527=
252)+252*(PEEK 16527=246)
110 GOTO 20
9000 FOR J=16509 TO 32767
9010 PRINT J;TAB 8;PEEK J,CHR$ P
EEK J;TAB 31;" "
9020 NEXT J
16509 0
16510 1
    
```

```

NOW IN YOUR HIGH STREET SHOPS

FOOTBALL MANAGER 3D

by Addictive Games

for SPECTRUM 48K
AND ZX81 16K

➔ This superb game is **now available** from branches of
W.H. SMITH * and BOOTS.

Manage your own team in this exciting game of skill which vividly captures the drama and excitement of real football.

FEATURES INCLUDE:

- * 4 DIVISIONS * F.A. CUP * PROMOTION & RELEGATION *
- * TRANSFER MARKET * TEAM SELECTION *
- * SAVE GAME FACILITY *** AND MUCH MORE! ***

WHAT THE PRESS SAY ABOUT IT:—

➔ *IF YOU have always wanted to manage a football team, FOOTBALL MANAGER, from Addictive Games, is for you — The game is ideal for a football fanatic but the most interesting thing for us was the 3-D graphics used to create the goalmouth action — the game is a winner.*
SINCLAIR USER FEBRUARY 1983

➔ *Although I'm no great football fan, I really enjoyed playing this game — excellent use is made of colour and user-defined graphics. The game is very logically put together, so that the development of strategy and tactics has a real effect. For example, one of my teams got through to the fourth round of the F.A. Cup where it was beaten by a second division side. This upset morale and meant that our promotion bid failed. Perhaps I should have given up the F.A. Cup run and held some good players back — the possibilities are endless. Brian Clough had better watch out!*

* SPECTRUM VERSION ONLY.

48 K SPECTRUM

ELECTRONICS

£6.95

Ever built a digital electronic circuit that didn't work? Now you can draw your circuits on the T.V. screen using standard symbols. (57 defined graphics are used). Wires may be interconnected or crossed and individual components may be rotated as required. Addition of earth and power symbols allows the computer to activate your circuit to display voltage levels throughout. Design may be activated, modified, re-activated, printed or saved on tape.

NUMERIC

£6.95

Solves any equation with single unknown and/or plots its graph. This may be rotated through 90 degrees and the axes subsequently varied to suit. Solves right-angle triangles, simultaneous and quadratic equations. Produces standard deviation, arithmetic mean and coefficient of correlation of lists plus deviation curves. All displays can be sent to the printer.

SHARES

£6.95

Stores daily prices of up to 20 shares/investments for a year. Displays graphs of performance over last year, 200 days or 12 days plus written data such as holdings, original and latest prices, percentage variation and equivalent annual variation. Holdings can be manipulated, bought and sold at will.

NUTRION

£6.95

Far more than a diet book. Builds up a profile based on your physique and lifestyle then monitors your food intake. It will advise, not only on calorie intake and ideal weight, but your personal requirements and any tendency to become deficient in vitamins, minerals etc. Offers advice on foods to correct the balance. Detailed information on all foods held in memory can be accessed at will. Operates in metric and imperial units.

These programs are exceptionally user friendly and have all been written in consultation with professionals in their respective fields. They all have comprehensive written instructions and are fully guaranteed. Dealer enquiries welcomed.

Please make cheques payable to SPECTRE.

ORDER NOW!

Lasers ready? You'll need them in the asteroid field

You are in command of a space ship in the year 2000, and the flight deck looks strangely like a VIC-20.

Your mission is to steer through an infinite number of asteroids which are scrolled up on the screen.

You can also blast them with laser torpedoes — but you only have 20, so don't waste them.

And you can put your ship into hyperspace as often as you like. It means that your ship vanishes and reappears at another point on the screen at the speed of light.

My program includes sound, score and high score. The more asteroids you dodge the more points you are awarded.

These are your controls:

A left
S hyperspace
semi-colon fire missile
equals sign right

If you find the game too difficult to begin with, try changing line 500 to:
500 FORT = ITO50: NEXT:
POKEA, 32: S = S + 1

The symbols in the program are explained below.

Short and neat — a space game for the unexpanded VIC-20, written by Nagaraj Jayakumar

```

READY.
  
```

Hints on conversion

Conversion should not be difficult as there are only two aspects to watch out for: first, change the 22 in line 250 to the number of columns for your computer.

For example, the Sharp has 40 columns, so the line would look like this:

```
250 B = INT(RND(1)*22) + 1.
```

The other point to look for is changing the cursor controls — they are explained under How it Works.

All the POKEs larger than 1000 are for colour and sound and so can be left out. In line 240 A is defined as a variable to be 7933. This is the POKE location of the centre of the VIC's screen.

How it works

100-235 instructions. 105: clear screen, cursor down nine lines, right five lines; 180-200: clear screen, new line for each phrase; 230: clear screen, cursor down three lines, set white; 240: clear screen, cursor down 22 lines

250-260 chooses where asteroids should be positioned

265 checks to see if ship has hit asteroid

280-330 check for keyboard input

500-510 tells computer to return to 250 and scroll
600-630 score, high score and run again routines. 600: clear screen, print blue; 610: new line for each phrase; 620: clear screen, cursor down five lines, cursor down once

Your micro's little helpers?

Vu-File Spectrum £8.95

VU-File for the ZX Spectrum has been on the market for several months. In that time it has deservedly remained one of the best-selling "serious" programs for home computers, offering a range of features that are matched by only a few, more expensive rivals.

With VU-File you not only can select the number of data fields required for your application, but can format the screen arrangement of the display of these fields in any way desired, and in any colour. Separate formatting of the printer output is also available.

All the usual features are present: add, delete, amend

These programs are designed to make molehills out of programming mountains. Our review panel tells you whether they do this trick

records, list, sort and search (sort and search work on any field), and save data on tape. There is also an inform mode, which aids file management. The machine-coded program gives a rapid response to all facilities.

On side B of the cassette is an example file called Gazetteer. This contains records of all European countries (16K) or all countries of the world (48K), providing a wealth of information for geography classes, and a demonstration of the power of this database program.

Another important feature is its availability through national retail outlets; no need for that frustrating wait when ordering by post.

Synthesiser BBC B £5

Worm Software, 76 Hurstwood Road, New Oscott, Birmingham B23 5BY

Here's your chance to step on the road to stardom. Develop your musical talents to the full! Synthesiser allows you to play synthesised tunes by converting the keyboard into a musical keyboard.

A number of options are available. You can simply play a tune (although you cannot store your creation); try but and define 14 parameters called

"envelopes" which can be changed to produce different sounds.

An instruction and information menu is provided which gives comprehensive details on how to use synthesiser. The instructions include a graphic display of keyboard notes as well as graphics showing, for instance, the relationship between pitch and time.

Music Maker 48K Spectrum £5.75

Bellflower Software, 6 Rosewood Avenue, Greenford, Middlesex

It's an interesting idea to use the Spectrum to write and store musical notes, display manuscript and playback tunes. In this case, though, the idea doesn't work out in practise.

Any key signature can be chosen and a variety of time signatures. Notes are then entered one at a time to the stave,

pitch and duration selected by the operator. Most musical notation is catered for, but some knowledge of music is necessary to use the program effectively.

But Music Maker is disappointing in three ways.

Editing is almost non-existent. You can only delete the last note entered on the stave; if you enter a lengthy tune and discover an error — tough.

Playback, even at the fastest of the 10 speeds, is very slow with an irritating pause at the end of each stave and a quite lengthy one when the screen is redrawn. A sound only option may have helped.

A printout facility is not provided. I am sure this would not have been too difficult.

The three main potential uses for this program — composing, replaying tunes and producing manuscript — are all spoilt by these problems — a great pity.

Toolkit/Screenkit Jupiter Ace £7.50

Remsoft, 18 George Street, Brighton BN2 1RH £7.50

Two excellent utilities from Garry Knight and the Jupiter Ace Users' Club (£1 off prices for members). No loading problems — spot on every time — and some really clever programming which you can use the Ace's LIST facility to study.

Toolkit's Scan command displays any 16 bytes of memory, giving the addresses in both decimal and hex, the data in both and as an ASCII character followed by binary.

This display can be moved up with the 6 key, down with the 7 (but the documentation has them reversed).

There are also facilities for poke, mem and base shift, plus a machine code definer.

Screenkit consists of a set of machine code routines for screen handling — left and right scrolls with and without wraparound, plus up and down. An impressive demo program can subsequently be deleted to save scarce bytes, and any individual facility can be selected out for inclusion in your own programs. You cannot have both programs simultaneously in 3K memory, as there are only 226 bytes free when Toolkit is loaded originally.

Plan ahead, and find out if you were right

It's obvious that sales of raincoats drop in fine weather and that sales of software rise as more home computers are sold.

The technique of measuring the effect of one on the other is called correlation.

And the advantage of knowing the strength of the relationships is that you are better able to make plans and predictions.

Program 1 for the Spectrum, Coefficient of Ranked Correlation, compares predicted results with what actually happens.

Correlation is measured between -1 and +1 with, for instance, +0.8 indicating a strong positive correlation while -0.3 would show only a weak negative correlation.

Ranked information is familiar to us all: Top 20 records, Miss World placings or 1-2-3 result in a horse race.

Variables

t accumulated variation squared
n the number of categories of data

c\$ category title

e expected rank or position

a actual rank or position

d difference between actual and forecast rank

r r2 coefficient of ranked correlation

Program 2 calculates what is called Pearson's Coefficient, measuring the correlation — with the same range of results — between two variable sets of data.

It could, for example, be used like this:

Comparison of expenditure on advertising with sales:

period	advertising sales expenditure (units)	
	£100s	000s
1	20	70
2	30	100
3	30	110
4	40	120

... gives +0.944, a strong positive correlation.

Comparison of ice cream sales with rainfall:

period	ice cream sales	rain-fall
	£	inches
1	200	1.5
2	200	1.4
3	300	1.2
4	400	0.8
5	400	0.6

... gives -0.969, a strong negative correlation.

Make sense of figures with two practical programs for the Spectrum from Dave Judson

Program 1

```

330 STOP
    
```

People in business might see a ranked list of products.

Here's an example: a range of rust preventatives for cars is recommended to you in this order, best first:

Antirot	1st
Beatrot	2nd
Counterrot	3rd
Deadrot	4th
Eatrot	5th

Test rankings on your company's fleet however indicate:

Counterrot	1
Beatrot	2
Antirot	3
Eatrot	4
Deadrot	5

Question: do you trust the experts who made the preliminary recommendation?

Using the program you will find the coefficient of rank correlation is +0.5, which indicates only a weak positive correlation between the advice given and your practical experience.

Why not measure your forecasts of the Grand National result against the actual placings? If you don't get a strong negative correlation, well done.

program 1

How it works

60 set up number of categories, (say the top 10 records or first five in a race)

90-160 input data, square the difference between actual and forecast ranking and accumulate sum of the squares.

170 and 180 calculate the coefficient of rank correlation rounded to one decimal place

190-240 print out your original data and the coefficient of rank correlation

260-290 set out a suggested interpretation.

program 2

How it works

10 set counter for data collection loop which follows at line 50
30-40 enter titles of the two sets of data to be compared

50-130 collect raw data, period by period, accumulate total for later calculation of an arithmetic mean

133-139 print on screen the data collected for examination before any calculations are done. Give option of re-start

160-290 all the number crunching

340-390 suggest an interpretation of the results

Games of the unexpected

for the unafraid...

THE WHITE BARROWS

Somewhere amid this maze of burial chambers lurks an Evil Sorcerer whom you need to trap. Trouble is, he's protected by Trolls, Dwarves, Serpents and the occasional Dragon or two! Your magic staff will block the tunnel to prevent him escaping unless, that is, he outwits you.

A real brain twister, White Barrows requires both brains and brawn from its players. It's no good just hacking your way through the Barrows and hoping to fall over the Sorcerer. Eventually you'll meet a Dragon, and they don't hack easily! You'll need all your strength and cunning to survive this one for long.

THE WHITE BARROWS Only £6.50 all inclusive!

CELLS AND SERPENTS

More monsters than you ever thought could live behind your keyboard. Wander the hills in search of gold and glory but be very, very careful where you tread! There are things here that will make your wildest nightmares look like Julie Andrews. Fancy meeting a Mind Flyer, for example? Or how about shaking hands with an Asmodeus? (You'll only do that once!) Treasure is here to be found though... the hard way.

See just how good you really are at adventuring with this practically unsurvivable fantasy. Not for the faint of heart or the slow of sword.

CELLS AND SERPENTS Only £6.50 all inclusive!

** SPECIAL DEAL **

Both programs for only £11.45 all inclusive!

Our Adventure Series programs are available on tape for the following systems:

Commodore VIC-20 (not available for White Barrows), Commodore PET, Sharp MZ-80A and MZ-80K, Tandy TRS-80 Model 1, BBC Model B or 32K Model A, Atari 400 and 800, Sinclair 48K ZX Spectrum.

ASP Software, ASP Ltd,
145 Charing Cross Road, London WC2H 0EE

Please send me . . . tape(s) of the following programs:
The White Barrows @ £6.50 each
Cells and Serpents @ £6.50 each
Both tapes at special price only £11.45
My system is a computer

You're the only one who can save our planet

Well, it had to happen. All those alien invaders finally took over the Earth, in spite of a spirited defence on computers throughout the land.

Having grown fat (and red) on a diet of human blood they've now retired to their strongly defended base somewhere in England's green and pleasant countryside, leaving you with only a single tank to your name.

My program, which runs in 16K on the standard TI-99/4A, is called Last Stand and simulates the final battle.

Move with the arrow keys (ES DX), with the alpha-lock button down. Fire with the space-bar.

Your task, in the unlikely event of your survival, is to destroy the alien headquarters at the top of the screen.

Luckily the aliens are pretty dumb and you will be able to hide behind trees and shoot from under cover, until, that is, you run out of trees. . .

It's up to you now, so climb into your tank and tackle the alien invaders in Vince Apps' program for the standard TI-99/4A

How it works

160-800 move tank subroutine
 170 look at keyboard
 200-580 fire shell
 600-610 store row and column positions
 620-730 select direction and new position
 750-790 draw tank
 820-1020 move alien subroutine
 820-860 generate new alien
 870-880 store row and column positions
 890-960 select new position
 970-1010 print alien
 1040 start of main program
 1130-1270 define characters and colours
 1290-1370 initial values
 1390-1480 print screen at start
 1500-1530 main subroutine calling loop
 1550-1560 delay subroutine
 1590-1630 destroyed by alien
 1660-1760 HQ hit

Hints on conversion

Texas Basic has some unusual commands for graphics and sound:

CALL CHAR (number, hexadecimal string) controls the user definition of characters. Number refers to the ASCII code of the re-defined character.

CALL HCHAR (row, column, number) prints the character whose ASCII code is number at position row, column on the screen. The TI99/4A has a screen size of 24 rows by 32 columns.

CALL GCHAR (row, column, variable) is the equivalent of PEEK. The ASCII code of the character at position row, column on the screen is left in the designated variable.

CALL SOUND (d, f, v) sounds a note of frequency f, duration d milli-seconds and volume v.

CALL KEY (O, K, S), the equivalent of INKEYS, will leave the ASCII code of the key pressed in the variable K.

CALL CLEAR clears the screen. A direct equivalent of CLS.

WINDOW ON ANOTHER WORLD

NEW RELEASES

STAR JAMMER — Wiping the sweat from my brow, I searched the inky blackness, ahead for signs of enemy fighters. 'Though Star Jammer was the best ship in the galaxy, my dwindling energy reserves made me doubt I could reach the next stargate... (a one player space arcade game requiring 1 joystick)

SUPER SKILL HANGMAN — Hangman as you've never played it before!

A vocabulary of over 1000 words, three levels of difficulty and an optional timer makes this classic word game a challenge for kids of all ages.

NIGHTFLIGHT — An accurate simulation of flying a single engine light aircraft, Nightflight allows for take-off, landing, and aerial manoeuvres including loops and rolls.

SALAMANDER GRAPHICS SYSTEM — A comprehensive picture drawing system for the home computer enthusiast. Pictures in any mode or colour set, text on the hi-res screens, and storage of pictures on tape. Requires 1 joystick.

ORIC TREK — A version of our classic Dragon Trek for the Oric-1! 10 levels of difficulty, 3 sizes of galaxy and more features than you can shake a Klingon at. A must for all Oric owners!

ORIC GAMES COMPENDIUM — Four exciting games for the whole family: Donkey Derby, Kingdom, Viper and Space Station.

DRAGON 32 and TANDY 32K (please specify):

Dragon Trek £9.95, Wizard War £7.95, Golf £7.95, Grand Prix £7.95, Vulcan Noughts & Crosses £7.95, Games Comp D1 £7.95, Salamander Graphics System £9.95, Super Skill Hangman £7.95, Star Jammer £7.95, Nightflight £7.95.

BBC MODEL B

Dragon Rider £7.95, Tanks! £7.95, Games Comp B1 £6.95, Games Comp B3 £6.95, EDG Graphics (tape) £24.95, EDG Graphics (disc) £29.95, ORIC 1: Oric Trek £9.95, Games Comp 01 £7.95.

Colour it a little more exciting with your Oric

The commands INK and PAPER, which set the global foreground and background colours on the Oric-1, can be used to create exciting effects.

PAPER sets all the attribute bytes in the left-most column on the screen to the desired value, while INK adjusts all the bytes in column 0.

Colour changes can be made with INK and PAPER to an existing display to produce effects like this routine which will simulate an explosion when you add it to one of your own programs:

```
1000 INK0:PAPER7:
EXPLODE
1010 FORI=1TO10:WAIT5
1020 INK7:PAPER0:WAIT5
1030 INK0:PAPER7:NEXT
```

INK and PAPER are useful commands when you want just two colours on the screen, but other techniques are needed to get more than two.

The ways to achieve this are using PRINT, PLOT, or POKE. PLOT is the easiest to use, but there are some restrictions to its use. Using PRINT to change colours is quite tricky, so I'll start with POKE.

This article deals with TEXT mode only. In this mode, the display file starts at address 48000 on the 48K Oric, and 15232 on the 16K machine. This address corresponds to the top left position on the screen, in the line normally reserved for system messages (e.g. Searching, and CAPS).

You can use that line by POKEing values onto the display file.

As an example, try the following routine (make sure you're in TEXT mode):

```
10 Z$="Hello"
20 FORI=1TO5
30 POKE48005+I,ASC(MIDS
(Z$,I,1))
40 NEXTI
```

In much the same way, you can POKE attribute characters onto the display file. The attribute codes are given in the Oric handbook, but for those who prefer to use decimal rather than hex, these codes are shown in table 1. Try this:

```
10 ATT=16
20 FORI=0TO27
30 POKE 48000+40*I,ATT
```

Create multi-coloured effects and add more appeal to your programs. David Nowotnik shows you how to do it with both models of the Oric-1

```
40 ATT=ATT+1:IF
ATT>23THENATT=16
50 NEXT
```

You should see all the eight colours on the screen, as horizontal bars.

The routine POKEs the background colour attributes into the left-most column of the screen display.

Now enter (as a direct command) PAPER 7, and your display turns white. The PAPER command has erased all the attributes POKEd in by the above routine, and replaced them with attribute 23. Try the routine again, changing line 30 as follows:

```
30 POKE 48020+40*I,ATT
```

This time you get bands of colour, but on the right hand side of the screen only. Enter PAPER 4, and the left hand side turns blue, but the colour bands are unaffected.

The new routine places a background colour attribute halfway across the screen in each row. The way Oric colour works is to move from left to right in each row. When a background colour attribute is encountered (usually in the first column), it defines the colour for the whole row, UNLESS another background colour attribute is encountered.

The background colour then changes at that point to the new colour. This is the colour for the remainder of the row, unless more attributes are encountered.

INK or foreground colours work in the same way. Modify the above routine by replacing lines 10, 30 and 40 with:

```
10 ATT=0
30 POKE 48001+40*I,ATT
40 ATT=ATT+1:IF
ATT>7THENATT=0
```

This time the foreground attributes are placed in the second column (numbered 0). You will

only see the colour changes when there is text on the screen, so don't use CLS first. Foreground attributes can be placed along the row in the same way as background attributes.

There are other attributes, for flash, standard characters, alternate characters, and double height. These attributes have values between 8 and 15. You may care to experiment with these.

The PLOT command is easier to use than POKE. For example PLOT 7,5,20 places the attribute 20 (background blue) at screen position column 7, row 5. This means that the machine calculates the screen address for you. However, PLOT will not work on the left-most screen column, and the top row. POKE must be used in these cases.

As an example of the use of PLOT, try the following as a direct command:

```
PAPER7:PLOT7,5,20:PLOT8,
5,"Hello":PLOT14,5,23
```

The routine places the message "Hello" on the screen. The attribute before the message changes the background colour

of the message; the attribute after the message changes the background colour back to white.

The use of PRINT to change colour attributes is explained in the Oric handbook, but may not be very clear to beginners. Let's examine a one line example:

```
PRINT"CHR$(27)"
TABCD"
```

The 'escape' character (CHR\$(27)) tells the computer that the next character to be printed is an attribute. In this case, the next character is a T, the code for background blue. As soon as the background attribute is printed, the 'escape' mode is automatically turned off, and the remaining characters in quotes are treated as normal text.

The space before the CHR\$(27) is required; you get some strange effects without it — you may like to try it!

Attributes take up space on the screen, therefore a character and attribute cannot co-exist at the same screen position. To explain this, try:

```
PLOT 7,5,"Hello":PLOT9,
5,20
```

"Hello" is printed on the screen with the first PLOT. The second PLOT command immediately places an attribute (background blue) over the first l. The background colour changes at this point, but the l disappears, to be replaced by a blank space. All attributes in the display file appear as empty squares.

Colour changes in HIRES mode obey similar rules as in TEXT, except that a row is just one pixel deep. A row is eight pixels deep in TEXT. There are enough special features about HIRES to make that the subject of another article. So, watch this space, that article will appear in the near future.

Table 1—Colour attribute values

Colour	Fore-ground	Back-ground
black	0	16
red	1	17
green	2	18
yellow	3	19
blue	4	20
magenta	5	21
cyan	6	22
white	7	23

Eyes down . . . for a look at the latest games

Ratings and run-downs from our review team on a selection of games for a selection of micros

**Protector
BBC B plus
Joystick £7.95**

Quicksilva, 13 Palmerston Road, Southampton SO1 1LL

In this variation on an arcade classic, your task is to wield your laser to protect research units on an alien planet from monsters and mine-laying UFOs.

If you really get into trouble, you can give in and use the hyperspace function — and as the game progresses, your troubles increase.

There's an imaginative scenario to the game on the cassette insert, and instructions for play are given on screen. Control is by joystick only — you can't use the keyboard.

As well as making the best of the BBC's colour, graphics and sound. Protector has that element of "just one more go" that will keep you playing it and maintain its popularity.

Well error-trapped and apparently bug-free, all in all a good, solid, enjoyable game. The only thing missing is a hall of fame feature — a pity, since it gives my children (and myself!) great satisfaction to see their names in lights.

**City Defence
Dragon 32
£5.75**

Shards Software, 10 Park Vale Court, Vine Way Brentwood, Essex CM14 4UR

This familiar arcade game is now being produced in many versions. Like Invaders, it must be the bread and butter of many software companies, otherwise they wouldn't produce these look-

**The Wizard
BBC B £6.95**

Quicksilva, 13 Palmerston Road, Southampton SO1 1LL

An interesting mutation of several arcade games, with an original theme. You take the role of Chzraal the wizard, whose task is to save five maidens from the attentions of a host of demon-like birds.

Chzraal stands on the edge of a small cliff, stage left, with the five ladies in a row in front of him, each perched on a rock. The birds descend from the top of the screen and attempt to carry them off.

To stop them, the wizard must fire at them with his magic wand, which you can move up and down by using keys A and Z. As he kills off each attacking wave, the difficulty level increases.

alikes. So how does this one compare?

A conventional interpretation in Mode 1 with few surprises. The familiar city is being bombarded by streamers and you have to destroy them with a laser guided by your joystick. A colourful display showing your city with some excellent explosive effects, and good accompanying sound.

The movement of the cursor isn't particularly smooth, and took some time to get used to. Once you've started to zap the streamers, your score begins to mount up on screen. Annoyingly, though, you lose 100 points when you succeed in wiping out the required number of streamers and your city is restored.

Bearing in mind the new wave of machine code games, this must be a poor, albeit cheaper-than-average version. You get what you pay for — not arcade standard but good of its kind.

M.P.

instructions	100%
playability	80%

value for money	80%

Colour, hi-res graphics and sound are used to the full, and what animation there is is superb.

The cassette insert sets the scene in time-honoured Quicksilva tradition, and playing instructions are supplied on screen. Despite my efforts, I found no bugs or accidental ways of crashing the program.

The Wizard's strong graphics and simple concept give it instant addictive quality, and a hall of fame feature for the top three scores adds to the competitive element. But perhaps it is a little too simple to have lasting appeal — especially for arcade-hardened addicts.

**Fun and Games
Dragon 32
£6.95**

Shards Software, 10 Park Vale Court, Vine Way, Brentwood, Essex CM14 4UR

This is the best of the Shards programs I have seen — a bumper package with some novel ideas.

Artist is a competition for up to four people. The computer asks for various inputs to create the parameters and then does the rest for you. It creates an abstract which is continually changing and which you stop when satisfied. The choice is then yours — either you or the computer must judge the 'paintings'. A nice routine where the computer deliberates and then chooses a winner.

Gold is a joystick operated romp through minefields to collect the glittering ore. Circles is good fun as well: a memory game where you have to pair off coloured circles. A simple concept used effectively.

Most unusual is Musical which allows the computer to control the cassette player for a game of musical chairs. A must for the children's party, complete with a list of names and eventual winner.

Other games are familiar enough and well presented. Noughts and Crosses challenged the younger children, while Brain provided the older ones with a good game of mastermind.

Donkey is a terrific party game using a joystick and sound for pinning on the tail. Snap, Anagrams and Dice complete the offerings on this well-thought-out compendium.

SOFTWARE REVIEWS

Family Programs Dragon 32 £6.95

Shards Software, 10 Park Vale Court, Vine Way, Brentwood, Essex CM14 4UR

A compilation of eight programs designed to cater for a wide range of interests, but suffering a little from the "jack of all trades, master of none" syndrome. Still, bearing in mind that the range is worthwhile in terms of providing a sample of what can be obtained, I shall deal with some of the highlights.

Tunes is a race against the clock to recognise as many songs as you can. The five song categories and over 100 tunes include nursery rhymes for the little 'uns and Golden Oldies for those with rather longer memories.

Finance offers a simple menu to either calculate mortgage repayment or savings. It could be used to work out any form of loan, though — useful for calculating the annual rate on the credit card payments for your home computer?

Quiz allows either one or two players to answer questions on a variety of randomly-chosen topics against the clock. The two-player version is unnecessarily complicated by the use of joysticks to pick out the letters of the answer, but the first version is an enjoyable competition for all the family. Both this game and Tunes require typing in PCLEAR prior to loading.

Also included is a maths quiz, a version of Simon, a tank battle, a few Oddjob items and a game where you thread a simulated wire through a simulated ring.

All in all, a nice collection which succeeded in interesting all members of the family, neatly packaged with loading details. A good idea, in my view, to reinforce Dragon's own advertising stressing the family aspects of computing. Could this be the end of the lonesome vigil beside the green screen? **M.P.**

Arcadia VIC-20 £5.50

Imagine, Masons Buildings, Exchange Street East, Liverpool

If you enjoy a game which involves destroying alien spaceships at breakneck speed whilst risking apoplexy, then give this a try.

The aim is to heriocrally destroy the waves of invading nasties which descend from the top of the screen. Do I hear someone say that space invaders does that too? Well that's true, but in Arcadia you have no protective shields, the aliens move randomly and are meaner and the pace is faster. On the other hand, you move your space ship in all directions, which makes life slightly easier.

The use of graphics animation are excellent and highly professional. The use of sound was good, only occasionally resembling a partly blocked drain or worse.

If you like arcade games, buy Arcadia, you won't be disappointed. **A.W.**

graphics	90%
value for money	100%

Schizoids Spectrum £5.50

Imagine, Masons Buildings, Exchange Street East, Liverpool

I suppose that after Arcadia anything would be a letdown, and this certainly is. Very high resolution graphics are all very well, but in black and white? On a Spectrum?

Basically you have to pilot your somewhat fragile space-bulldozer around the screen, avoiding the large spinning shapes which wander on from all directions. In the centre of the screen is a Black Hole, looking rather like a Christmas Tree star having a fit.

Once bulldozed into said hole the shapes disappear, but don't expect to score any points. You don't score points at all in Schizoids — you simply exist. The number of seconds for which you manage this feat becomes your score.

Easy? Not at all. Your bulldozer explodes if hit in the sides, and if hit head on at any great speed. So the whole game can be reduced to just steering the craft around and staying out of trouble. **R.H.**

Mined-Out Dragon £4.95

Quicksilva, 13 Palmerston Road, Southampton SO1 1LL

The packaging and presentation of this game is very good. A lot of thought has gone into the blurb and the instructions are very comprehensive. There is even a demonstration game.

It's an interesting idea where your objective is to rescue Bill the worm. To get to him you have to travel through seven minefields which get progressively more difficult. You guide yourself through the fields with the arrow keys and the machine code assisted sub-routines assure you of a fast response with on-screen scoring and high score record.

A nice feature is the replay of your moves after a mistake thus showing you how you went

wrong! In time you learn, like the proverbial rats in a maze, to respond correctly although further hazards present themselves to ensure that your job gets tougher.

All this is achieved on the low resolution screens which, graphically, is not very exciting. There seems to be a great disparity between the packaging and the visual product. I must confess I was disappointed. However, colour and sound are used dramatically and kept me interested.

It was helpful not to have to restart at rock bottom each time. Once on level three you had the option of restarting the level prior to your downfall. **M.P.**

NEW! NEW! NEW!

Rainbow Research

288 High Street, Ponders End,
Enfield, Middlesex, EN3 4HF, England. HCW14

Rainbow

'CHARGEN' & 'DEMO' for BBC A-B

Space does not allow full description of this program. Generate in 8 static and 8 flashing colours your own characters. Sizes from 2-24 pixels wide x 8 pixels deep. Full cursor control, actual size of character shown. Press for Byte string needed to generate the character. 'Demo' will show you how to save and incorporate characters into programs. Full documentation for both the programs on one tape. £8.50

'LANGUAGE TUTOR' for BBC A-B, SPECTRUM, ACORN ATOM & VIC-20 (unexpanded)

The ideal program for the exam swot or revision. Key in your own choice of foreign and English words, the program then presents them at random for your translation. You can save your words on tape and create your own vocabulary database. £5.00

'LANGUAGE DATA TAPE' (for machines as above)

Available in German or French, hundreds of words pre-arranged in groups ready to load into the language tutor program. £6.00

'READ ARROWS' for BBC A-B

A spelling game for primary level. A string of words pass along the top of the screen, shoot down the mis-spelt words with the red arrows. A fast moving game with a real educational value. £6.00

'ADDRESS BOOK' for 16K & 48K SPECTRUM (state which)

This is the one you have been waiting for. Ideal for personal, business and club use. Menu driven includes up to 100 characters per entry and commands like search, add, alter, display, save, erase and print. All you will ever need in a database. £6.00

'DATAMASTER' for VIC-20 (unexpanded)

A small but flexible database program includes a menu driven list of options like input, view, change, output, load, alpha-sort and clear. Ideal for personal and club records. £5.50

'THE GREAT IBERIAN CRYSTAL' for BBC A-B

Are you tired of uncompromising adventures, if so this one is for you! A unique game which will have you spell bound. Dare you let loose wild dogs on a man eating warlord? Will the spells work for you...? £6.00

'SOLITAIRE' for VIC-20 (unexpanded)

This is the familiar classic you normally play with plastic pegs. Make your moves to leave the last peg standing in the middle position. Sounds easy doesn't it! Hours of family entertainment. £5.00

'ZAXX' for VIC-20 (unexpanded)

Shoot down the aliens with your laser, not just from one angle but from three, some good sound effects, great fun. £5.00

'COBRA' for VIC-20 (unexpanded)

Just how many of the tasty morsels can the cobra eat, you can move in all four directions. Another fine game with sound, colour and some surprises. £5.00

Kiltdale

At Kiltdale we don't treat computer program duplication as a side line. We are the specialists.

Since we started three years ago, we have developed a dedicated data duplication service that is second to none.

We developed specialist machinery and installed it in a clean air environment. Couple this with our tape, specially formulated for data. Add rigorous quality control and our product and service speak for themselves. No job is too large or too small. So if you are looking for data cassette duplication, why don't you call us?

QUITE SIMPLY THE BEST

Why Micromega put programs on to a million TV sets

Micromega is the first home computer software company to advertise its games on TV. Candice Goodwin finds out why this company is spending thousands of pounds on commercials

If you are watching ITV or Channel 4 a couple of weekends ago, the chances are you will have seen Micromega's advert for its range of Spectrum games. If you did, you'll have witnessed a minor milestone in the history of the home software industry.

Though TV adds for video games are nothing new, Micromega is the first home computer software company to advertise its wares on television. It will probably be the first of many.

Glossier advertising in a wider range of media is an important sign of the software companies' growing determination to sell not just to confirmed

computer fans, but to a wider commercial market too.

It's no accident that Micromega's new programs are simulations of traditional games like dominoes, roulette and blackjack, rather than the zap-the-aliens arcade variety. The ads have been deliberately placed in family viewing slots to appeal to the widest possible range of people.

Neil Hooper ▸

As Micromega's sales manager Neil Hooper said: "We hope that the whole family will see it and think, well, I could enjoy playing that."

Micromega grew up out of Quantec, a company which produces business software for

business microcomputers. The idea of selling home software resulted from a meeting between Quantec's managing director Robin Cooke-Howe and a machine code programmer, Tony Poulter.

Neil Hooper says of Tony: "he regards Basic as not a useful development tool. He's never owned a 16K RAMpack in his life."

The result of the meeting was a couple of machine-code game compilations for the 1K ZX81 — and a 1K program to carry out tax calculations. "That was really a bit of a

flashy programming exercise", Neil said.

After the tax program came a range of "serious" programs for the Spectrum, Dragon and Newbrain, designed for home computer owners who want to manage their finances by micro. Quantec was having to have larger and larger batches of tapes made for sale, and decided to try its hand at the games market again, but this time on a larger scale.

To organise the campaign, Robin lured Neil away from Tape Duplicating Company, where he had set up the data duplicating operation. Neil recalls: "Once I'd done that, there was nothing to create at Tape Duplicating Company any more, and I didn't want to just go on overseeing the duplicating — that's not the sort of animal I am. So when Robin made me this wonderful offer — well, I couldn't very well refuse.

"I've been given £7,500 to get this show on the road."

Of that, about £4,000 will be taken up by the TV advertising campaign. The purpose of this isn't just to sell more tapes — it's also to get Micromega's name around. "A major spinoff is being able to say on our magazine ads, 'As seen on TV'. You've got to help the dealer. Because if you can't get into retail now, you're sunk.

"I think a lot of small software houses will run into problems as mail-order goes by the board."

Micromega does not sell tapes by mail order at all. Instead, they use a network of dealers including big chains.

As well as selling their own tapes, Neil and Robin plan to act as an "umbrella" organisation for small software com-

PROFILE

panies who want someone to sell their products for them. According to Neil, "Most of the buyers in the big chains don't want to deal with individuals. They want to deal with just a few companies they know they can get good stuff from. You have to be able to talk their language, too."

"There may only be three or four companies able to sell into retail chains by the end of the year. Small companies can come to us and plug straight into our expertise."

Micromega employs five programmers, most of whom work at home. But more often than not their job is not to write a program from scratch, but to tidy up material sent in on spec. Neil said, "Our five new games were all submitted, but you wouldn't recognise them from their original form. Nothing submitted to use ever goes out as it came in."

Tony Poulter, the machine code whizz, is now concentrating on developing a library of memory-efficient machine code routines for use in pro-

grams, particularly graphics routines. "Good graphics can lift up a very mundane program into something special", said Neil.

Graphics have to be handled with care, though. As Robin pointed out, "you have to be controlled in the way you use graphics. You can have very pretty programs that don't actually do anything."

Some clever graphics were used to add the finishing touches to Micromega's new Craps program. In its original form, the program just showed the dice which indicated random numbers. Robin said: "we showed it to the dealers and they were lukewarm. So we thought, must do better on that one". The final version shows the Craps table, and a little hand which comes out and throws the dice.

Though machine code routines will take care of the fast action in Micromega's games, their programmers don't use machine code just for the sake of it. Said Neil: "in many cases, there's no signifi-

cant difference between Basic and machine code, except that the development costs for machine code are much higher. You have to be able to write programs quickly — that's why Basic was invented. This thing about machine code is a real myth."

Next on the agenda for Micromega is a selection of Dragon games: three hybrid adventures in very different settings. For these, Neil is toying with the idea of using photos of puppets for the cassette inlays. "Remember the Thunderbirds? A bit like that. Ideas are the key — you've got to do something really different."

Nine more "serious" software products will be launched in the next month or two, which may use the Spectrum Microdrives if they have become available by then. "We know a lot about the Microdrive's operating system — I'd prefer not to reveal my sources — and we can adapt the programs very quickly."

And later in the year, there'll be the launch of a new

Robin Cooke-Howe

product which is still under wraps. All that Neil could say about it was: "It's a joint venture, and we'll definitely be advertising it in the women's magazines."

Watch this space.

TRS80 LV.2 — ZX SPECTRUM — ZX81 SOFTWARE LIBRARY TAPE

25 great programmes on one pack:— Star Wars, Gambling Machine, Breakout, Trap It, Population Simulation, Corridors of Doom, Housebreak, Towers of Hanoi, Butterfly Chase, The Vault, Yahtzee, Maths, Calendar, Amazing 3D Mazes, 3D Noughts & Crosses, Jackpot Bandit, Hangman — musical, bible, history & sport, Mastermind, spelling, Diary, Records File and Time Warrior.

We only have room here to fully describe one programme, please don't hesitate however, to phone or write for full details of all the programmes.

HOUSEBREAK:— You have entered a house at night in an attempt to rob it of Money and any Gold and Silver items you can find. It is very dark and your must avoid bumping into the furniture. After a period of time an alarm will sound and soon after this the lights will be turned on. A vicious dog is then released. You have to use all your skill and cunning to avoid getting bitten as the dog chases you around the house; any injury caused by the dog will slow down your escape. The game is played in 'real time' and has excellent graphics. A different house is generated each time the game is played.

The full cassette of 25 programmes is sent to you for only £8.95!

Trade enquiries welcomed.

Sinclair ZX Spect

The growing range of Spectrum Software

You'll know already that the Spectrum has generated an enormous range of peripherals and independent software. Our own range is growing very fast and is shown in the Sinclair Software Catalogue – free with every ZX Spectrum.

rum-news!

**16K now
£99^{·95}**
Previously £125.

**48K now
£129^{·95}**
Previously £175.

At last, a 16K colour computer with graphics for under £100!

Why have we done it?

Partly because the sheer volume of Spectrums sold (over 300,000 so far) has brought down unit production costs.

And partly, of course, because we hope you'll buy a Sinclair computer – and not some competitor's promise! We've all heard about colour computers breaking the £100 barrier. Here's the computer that's done it. A colour computer with advanced graphics that's fully supported, and widely available.

Right now, you can order a Sinclair Spectrum at these prices direct from Sinclair on the order form below. And to make it even easier to handle high-level computing at the

lowest possible price, we've cut the cost of the printer, too. At £39.95, it's almost unbelievable!

At prices like these, there's really no reason to wait.

**ZX Printer now
£39.95**

Room for disc-ussion

In your recent review of our Graf series of programs, which appeared in issue No. 10, your reviewer has either got his facts wrong or has poorly conveyed the correct facts. It is stated that the picture can be saved to tape in about 20 seconds, which is quite correct, but that saving to disc is only about two seconds faster. In fact the save and load using disk takes about two seconds not 18 seconds. If the reviewer's disc is taking this long, I suggest that he has it checked.

The review states that the programs fail to exploit the full graphics capabilities of the BBC, without stating the facilities lacking. If providing all the available modes, colours and resolutions plus all the shapes, in outline or filled, mentioned in the review is failing to exploit the capabilities I would be interested to know just what is expected, bearing in mind that the programs have to be compatible with all operating system versions.

The review also bemoans the lack of a printer dump. While we agree this is a very useful facility to have we have also stated in the instructions that one is on the way, along with several other facilities. The upgrading will apply to both cassette and disc versions, with the cassette upgrades being provided on a separate cassette.

The reviewer complains that hitting the break key loses the program and picture when he tries to type OLD. There are several problems here. Firstly there is no way to disable the BREAK key, a problem that applies to everybody, not just CLARES. The cassette versions will re-run when BREAK is pressed, if they are being used on a computer without disc interface. If a disk interface is fitted, pressing BREAK results in the disc operating system corrupting sections of the program. This cannot be stopped, and the only solution would be to not use that section of memory, which would mean less features.

My last point is about the value for money rating. I cannot understand how Grafdisk can be awarded 85% but Grafkey only 40% when they are both basically the same program. The only real difference is that the disk version

Send your letters to Letters, Home Computing Weekly, 145 Charing Cross Road, London WC2H 0EE. Don't forget to name your computer — the best letter could win £5 worth of software. Queries cannot be answered on this page

offers a SCREEN SAVE facility that is impractical on cassette. As Grafkey is £7.95 and Grafdisk £12.95 I find these figures bewildering. Okay, disc is nicer, but you are supposed to be reviewing the program and not the medium. The majority of users will never have disc drives, and so a comparison between disc and cassette is of no real interest. To say that a program is better because it is on disc is rather elitist.

Dave Clare, Clares, Winsford, Cheshire

Into the Tomb... and others

I'd like to comment on the excellent reviews of VIC-20 games in a recent issue, as my family have devoted many hours to three of those games reviewed and can add to AW's impressions.

Although death may seem sudden and arbitrary in Pharaoh's Tomb, there is only one way of succeeding — involving a combination of speed and sequence of actions. It is possible to solve the puzzle through guesswork and logical deduction, although the diminutive size of the objects encountered doesn't help.

There's no need to reload the game as, after each failure, the player is offered the option of trying again. There is a bug (usually triggered by approaching the spade from the wrong direction) from which the game never recovers; even in this case my children found that they could avoid the six minute reload time by keying STOP/RESTORE to clear the error and the RUN40 to bypass the reload sequence.

The main criticisms of the game must be the lack of a joystick option, as the use of the keyboard is slow and tiring and the fact that, once the puzzle has

been solved, Pharaoh's Tomb loses its appeal.

Starship Escape is as described and, should you reach some of the more distant chambers, you will find some unexpected and fascinating adversaries. Although it is possible to play the game for hours, making progress all the time, it is a great pity that there is no option to save the game for continuing another time.

Another criticism is the bug which crashes the computer whenever the option to restart from the beginning is taken. In this case there is no way of avoiding reloading.

In Krazy Kong it is possible to negotiate the elevator and to reach the fourth screen, because my children have done so several times although, like your reviewer, I can't do it.

AW missed the fact that in the first screen the "maiden" is a fella! However, he (she, it?) does change sex in subsequent screens.

One point which comes out of all these excellent games is that few games are sold without residual bugs. Is this because their producers do not bother to have them tested out by children, or is it due to the pressures of advertising games before they are completed?

Eric Finlayson, Macclesfield, Cheshire

Feet of clay?

Mr G A Bobker's letter on page 14 of HCW No. 11 restored my faith in human nature. Here was a rare phenomenon in the software jungle — a man who would not stoop to break the Trades Description Act by showing false pictures on cassette inserts.

To quote a passage from his letter, "This (his venture cassette) is unlike the majority of cassettes which are blatantly breaking the Trades Description Act... I for one am not prepared to splash

space ships and rockets on a sleeve unless the game actually contains the graphics thus shown."

At last a man of upright stature and integrity — but wait... what is this I see on page 45 of the same issue of HCW? An advert for a program which enables the user, and I quote again, "to stop and copy any previously unstoppable Spectrum cassette." Guess who was offering this program for sale? That's right — Mr G A (Double Standards) Bobker of the same address.

B Robinson, Newcastle-under-Lyme, Staffs

Don't forget...

I am the proud owner of a 16K ZX81, from which I get much pleasure. However, the amount of software still being produced for this machine is falling.

I realise that the Spectrum offers far better programming opportunities, but what about the millions who still own ZX81s?

Anyway, congratulations on a first-class magazine, and at least you still cater for everyone.

Paul Smith, Cheam, Surrey

...the ZX81

I enjoy reading your magazine and find it very good value for money at only 38p. One of the features I enjoy most is the software reviews.

Unfortunately I find that only one or two tapes are reviewed for the ZX81, while many more are reviewed for other computers like the Vic, Spectrum and Dragon.

I'd like to point out that the ZX81 has sold more in this country than any of the above-mentioned machines. More software reviews for the ZX81 please!

Russell Wooberry, Farnham, Surrey

We're right behind you on this, Russell, and that's why we're continuing to print ZX81 listings on a regular basis. The trouble is, our software reviews can only reflect the software that's on the market — and it's a sad fact that more and more companies are now concentrating on producing Spectrum programs. So come on, software firms — don't forget the ZX81 users.

Oric troubles aren't over

In your third issue you published a letter from me regarding my problems with Oric Products. The problems are still continuing!

I finally received an Oric on March 26, almost 24 weeks after ordering. Right from the start it failed to operate at all, and one of the keys was actually jammed down. You can imagine my anger and frustration after waiting for so long and then receiving a faulty computer.

However all was not lost. In the local paper I noticed that a nearby shop was advertising Orics for sale, so after sending back the one I had just received I dashed off to the shop, watched the demonstration tape, thought "this knocks the spots off the Spectrum" and parted with my hard-earned cash.

After a few sweaty, keyboard-pounding days I finally came to the conclusion that the Oric is not all it's cracked up to be. So on April 6 I put pen to paper — or, to be precise, finger to typewriter key — and dashed a letter off to Oric Products containing a whole list of questions I wanted, and still want, answering. As yet Oric hasn't even acknowledged my letter, let alone replied to it.

Since writing, I have started to experiment with the sound commands. Oh dear! It is impossible to have even a key click emitted from the computer without disturbing the screen display. No amount of tuning of computer or TV will cure this.

I consider that the Oric's specification contravenes the Trades Description Act, and unless my queries are cleared up I'll be claiming a refund under the Sale of Goods Act.

A.J. Lenton, Poole, Dorset

Pam Durkie, for Oric, said: "A useful tip for adjusting screen distortion is to fine tune, using adjusting screws underneath the Oric, while the computer is set to PAPER Red. But if Mr Lenton has no luck with this and his other problems, he should take his Oric back to the dealer and ask his advice. All Oric dealers have been issued with full instructions on how to sort out commonly-occurring problems. If all else fails, they will make sure the Oric is sent back to Oric Products and repaired."

We'll meet again

I was interested to read John Shiali's letter in HCW May 17-23, because I own both a Spectrum and an Oric. I use them both about equally, but I much prefer the Spectrum.

The Oric has some wonderful features, it's true, but getting them out of the machine is a real pain. And not only is the Oric now more expensive than the Spectrum, as Mr Shiali points out, but its peripherals are more expensive too.

In the same issue of HCW a news item suggested that Oric Products might take up the Tandy's four-colour printer as standard for the Oric. I have already invested in one of these machines, which works fine with the other computers (such as the Dragon, Spectrum BBC etc), but becomes very unreliable when used with the Oric.

When listing I find characters which shouldn't be there, characters missed out and difficulties with paper feeding. The Sinclair printer has its faults too — but then at £70, who can complain?

My final point is the same as Mr Shiali's too, and concerns the ZX Users' Club. It was a grave loss to all the ex-members (myself included) when the club was closed, but never fear — we will all be able to meet again at the ZX Microfairs, because Interface will always be there (fanfare, cheers and great finale).

Peter Shaw, Stanwell, Middlesex

The reviewer strikes back

I've noticed in recent issues of HCW — see, for example, No. 11 — letters from readers knocking what has been said in software reviews.

Some of the criticisms have come from people who already own a piece of software that's been reviewed, and some from indignant software companies, and I thought that as a reviewer I'd stick my oar in too.

Firstly I'd like to emphasise that we reviewers are not biased in any way for or against the software we review. We have no links with software companies. So we're not out to pick holes in anybody's product nor, on the other hand, to say something is good when it isn't.

Whether you agree with the content of a review or not, please

try to accept it for what it is: the reactions of an ordinary computer owner and potential software buyer to a piece of unknown software placed in front of him or her.

Not everyone likes and dislikes the same things, and of course a review shouldn't be taken as the last word on any product.

All we are attempting to do as reviewers is give you some advance information and opinion on a piece of software, so that if you decide to pay your money for it, you don't get a nasty shock. And other readers' letters indicate (eg Simon Vincent's letter in HCWS No. 12) that all too often the reality of a software product contrasts unfavourably with the manufacturer's hype.

In response to the argument that a game which initially seems unappealing will be fine after a lot of practice, I feel that games shouldn't be something you have to flog to death in order to get any pleasure from them. A good game must have long-term appeal, sure, but that doesn't mean it shouldn't be appealing to start with.

Finally, I'd just like to say that anyone who thinks reviewing software is easy should try it themselves and see!

A.W., Waltham Abbey

Clubs...

Please can you give the Basildon Microcomputer Club a mention?

We held our first meeting on January 11, and were amazed at the response.

Mark Court, 101 Plumleys, Pitsea, Basildon, Essex

... clubs ...

This is to advise you of the formation of the Iver Computer Society: the ICs.

The meetings will be bi-monthly on 2nd and 4th Thursdays, and anyone interested should write to me or phone Iver 654431.

John Haigh, 141 Leas Drive, Iver, Bucks SL0 9RP

... clubs

We should be obliged if you could publish details of a multi-user Home Computer Club we have just formed for the whole of South Avon district.

I will supply interested readers with further details.

Valerie Boyde-Shaw, Secretary, Byte Home Computer Club, 7 Riverway, Nailsea, Avon BS19 1HZ

If a thing's worth doing...

I do not normally feel moved to write to computer magazines but I feel I must respond to John Shiali's letter in HCW No. 11.

With regard to the difficulty of programming the Oric, I feel that if you want to produce more elaborate sound than the horrendous beeps the Spectrum has to offer, then you really must be prepared to attempt something more exacting. In the same way, if you want to write arcade action games, you have to knuckle under and learn to program in machine code.

Secondly, any cassette recorder with a five-pin DIN socket will support the Oric's lead, which is far more reliable than a jack plug connection. I personally have found no difficulty with the Oric's high speed baud rate.

One final point — you get what you pay for.

C. Black, Glasgow

On your bike, Eugene

After reading with interest about "Eugene's driving ambition" (HCW No. 11), I thought I'd let you know about our programmers' ambitions here at Artic.

We have a team of six full-time programmers between the ages of 14 and 16. None of them drive, but they have all been supplied with Raleigh Super Sport Racers at a total cost of £720.

However when they pass their tests, we will be supplying them with company Lotus Esprit Turbos — we believe in buying British, and anyway, they're faster than a puny little Ferrari 308 GTS.

At the moment Richard Turner, Artic's managing director, drives a British-built Aston Martin Lagonda. But technical manager Chris Thornton, the black sheep, is driving a Lamborghini Contach LP500S, which he is waiting to take to Germany to see if it really will do 180mph.

I'm another traitor — I drive an Audi Quattro imported by VAG.

Ever thought of renaming your magazine Home Computing and Hot Car Weekly?

Michael Hunt, General Manager, Artic Computing, Hull

TIRED OF YOUR COMPUTER? WHY NOT SELL IT AND BUY A NEW ONE WITH A MINIMAL AMOUNT OF EFFORT USING ONE INDEX FINGER. RING 01-437 1002 EXT 213. AND SELL THE WEEK AFTER.

MAIL ORDER PROTECTION SCHEME

If you order goods from Mail Order Advertisers in this magazine and pay by post in advance of delivery, this publication will consider you for compensation if the advertiser should become insolvent or bankrupt, provided:

1. You have not received the goods or had your money returned; and
2. You write to the publisher of this publication explaining the position not earlier than 28 days from the day you sent your order and not later than 2 months from that day.

Please do not wait until the last moment to inform us. When you write, we will tell you how to make your claim and what evidence of payment is required.

We guarantee to meet claims from readers made in accordance with the above procedure as soon as possible after the advertiser has been declared bankrupt or insolvent to a limit of £1,800 per annum for any one advertiser, so affected, and up to £5,400 p.a. in respect of all insolvent advertisers. Claims may be paid for higher amounts, or when the above procedures have not been complied with, at the discretion of this publication, but we do not guarantee to do so in view of the need to set some limit to this commitment and to learn quickly of reader's difficulties.

This guarantee covers only advance payment sent in direct response to an advertisement in this magazine (not, for example, payments made in response to catalogues, etc, received as a result of answering such advertisements):

CLASSIFIED ADVERTISEMENTS ARE EXCLUDED.

Invading your space NOW!

MEGAPEDA

No matter how fast I fired, the Megapede kept on coming! I was gaining ground, though, when suddenly the Spider appeared on collision course zero! Turn - dodge - I out-maneuvred, I blasted him. But just then Scorpi appeared dropping her indestructible fleas... Nine levels of play plus high score 100% machine code. Full colour and sensational sounds. Rated by T.V. Choice as "a superb rendering of the popular arcade game". Realisation: Andrew Beale.

MONSTERS IN HELL

It was like a nightmare... trapped in a Hellish scene... chased through a maze of platforms and ladders by Vampire Monsters. But I had my Magic Hammer, and The Power was on my side. The Monsters were falling at my feet! When suddenly the Mad Monk sent forth his ghouls... Amazingly amazing addictive game, in super-fast machine code, with full colour graphics and superb sound. Realisation: Martin Lewis.

Just two of Softek's amazing range of software for the ZX Spectrum.

£5.95

each including VAT and perpetual guarantee; 16K or 48K Spectrum.
